# SITE SPREADER

LEADER IN  
DUST-FREE APPLICATION  
OF SOIL STABILIZATION MATERIALS

Road building  
Commercial  
Public works  
Airport projects

Truck-mounted  
Trailer models  
Barge-mounted

**STOLTZ**

## SITE SPREADER

**There's only one.**

STOLTZ is the industry leader in this specialized class of construction equipment.

With a legendary reputation in agricultural spreaders, today we make a host of heavy duty spreading equipment for road building, construction sites and other projects where sturdy temporary roadways are essential for construction safety, speed and ability to work in wet conditions.

*Dust-free spreading for creating worksite roadbeds*

### **Soil stabilization for large projects**

- Road building
- Public works
- Airport projects
- Any construction site
- Remote locations

### **Range of materials**

- Portland cement
- Quicklime
- LKD
- Flyash
- Hydrated lime
- Bentonite
- Custom blends

### **Built to spec**

- Truck-mounted
- Trailer models
- Barge-mounted

# Soil Stabilization

***“There is simply nothing else like our Stoltz Site Spreader.”***

*We created a worksite roadway on this 150 acre site that keeps our equipment working even in wet conditions. We put down quicklime at 27 pounds per square yard, and the roads were done by lunch. What a great machine.*

*Chuck*  
General Manager  
Illinois

# Did You Know?

*Barge-mounted unit applies bentonite materials clay to seal a leaking reservoir.*

TODAY'S soil stabilization techniques for construction sites originated with the U.S. military when searching for a way to quickly build emergency airfields in times of combat.

Improving on those first techniques, today a wide range of materials are applied to disturbed soil to create temporary roadways on excavated sites to allow heavy equipment safe access even in wet conditions.

The result is less downtime, less wear and tear on heavy equipment, improved worker safety, and increased productivity that helps meet crucial deadlines.

Stoltz Site Spreaders are commonly used in road construction as part of the fleet, often preceding a foamed asphalt reclaimer, for the dust-free application of a wide range of materials.

## Applications that meet spec

Whether drying or stabilizing a job site, or recycling an asphalt road (CIR or FDR) or preceding a foamed asphalt reclaimer, the Stoltz Site Spreader is the machine for Portland cement, quicklime, flyash (Class C or F), hydrated lime, kiln dust or bentonite.

*STOLTZ Site Spreaders are widely recognized for their heavy duty 7-gauge steel construction, long term reliability, ease of use, accuracy and flexibility for spreading a wide range of materials.*

It's not just a machine,  
it's a solution.

SITE SPREADER

*Unstable soil hinders work, compromises worker safety and causes unnecessary delays. Not anymore. 610-286-5146*

# Taming the toughest terrain

Engineered to work with standard site equipment. Dust-free filling.

Dust-free application of soil stabilization materials. Nothing else equals it.

Automatic spreading accuracy, with the operator in full control, with manual override.

Over 50 years of spreader design and construction expertise built into every unit.

## Makes a road where there is no road

The Stoltz Site Spreader is unlike any other construction equipment. It applies precise amounts of soil stabilization bulk materials, as the most efficient way to create worksite roadways and a stable working surface for heavy equipment.

Used extensively in road building, airport construction, and wherever large areas of disturbed soil must be stabilized, there is no equal for the purpose-built Stoltz Site Spreader for ruggedness, reliability, accuracy and ease of use.

### Standard Features

- Radar controlled application
- Pressure relief valve
- Automated application control
- Loads from tanker at 1 ton / minute

### Models and types

- Truck-mounted models
- Trailer models
- Twin auger delivery, or
- Moving floor delivery

### Capacity

- Trailer unit in half-tanker or full-tanker sizes
- Truck models in 15 and 27 ton models

### Options

- Digital scales
- Automatic rate controller w/radar
- Spray system for dust
- Pulse jet bag house
- Auxiliary engines when needed

30" conveyor chain; virtually dust-free filling

Dual 12" auger, completely dust-free filling

### Every Stoltz Site Spreader Delivers

- Spreads up to 90 lb/sy at 2 mph
- Operator friendly, radar-based accuracy
- High capacity with great maneuverability
